ATTENTION

BEFORE STARTING

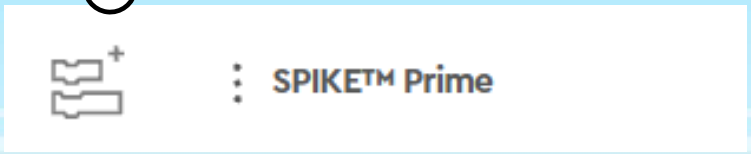

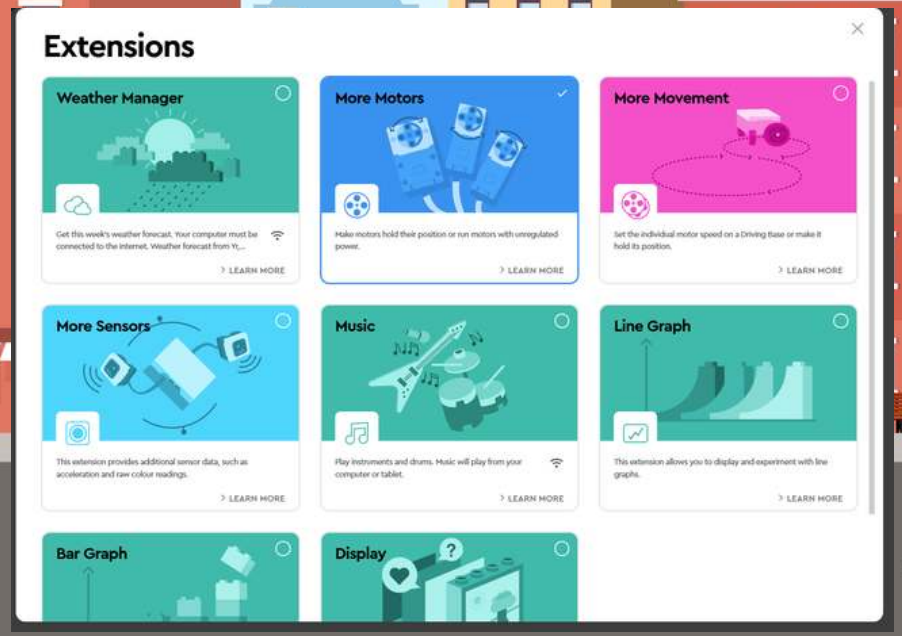

Um die Nullposition einzustellen, richte den Punkt auf dem Rotor auf den Kreis am Motorgehäuse aus.

To set the zero position, line up the dot on the rotor with the circle on the motor frame.

IMPORTANT

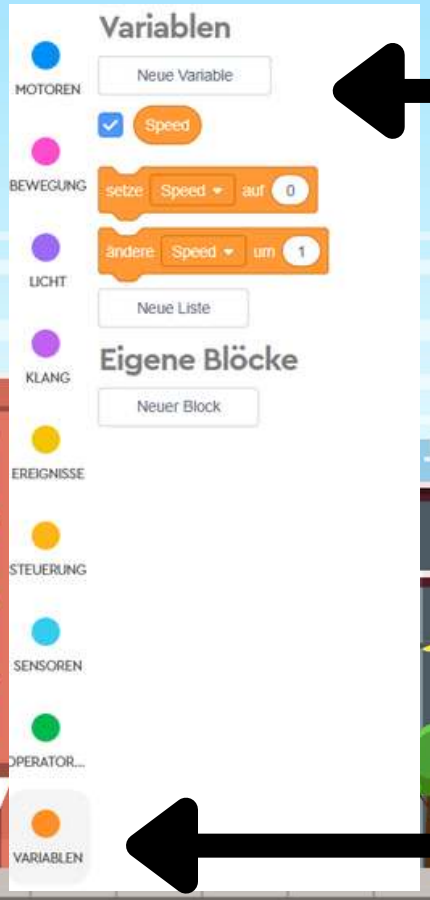

Wenn du den in dieser Anleitung verwendeten Block nicht finden kannst, klicke auf das Symbol in der unteren linken Ecke (siehe Abbildung links). Daraufhin öffnet sich ein Fenster, in dem du die für dieses Projekt benötigten Erweiterungsblöcke finden und hinzufügen kannst.

If you cannot find the specific block used in these instructions, click the icon in the bottom-left corner (shown in the figure on the left). This will open a window where you can find and add the extension blocks needed for this project.

TASK 1

2

1

Erstelle eine neue Variable

Schritt 1: Klicke auf den orangefarbenen Punkt mit der Bezeichnung „Variable“

Schritt 2: Klicke auf „Variable erstellen“

Schritt 3: Nenne deine Variable „Geschwindigkeit“ (speed in English)

Variablen sind wie digitale Behälter oder „Zauberkästen“, in denen Informationen gespeichert werden, an die sich dein Programm erinnern und die es später nutzen kann

TASK 2

Dieser Code wurde entwickelt, um die Geschwindigkeit des Motors im Rückwärtsgang über einen Zeitraum von 10 Sekunden schrittweise zu erhöhen

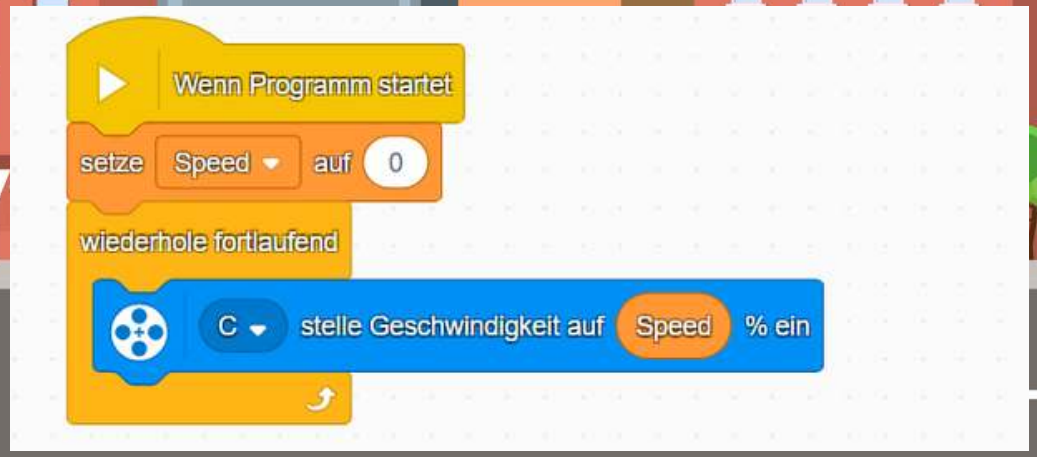

TASK 3

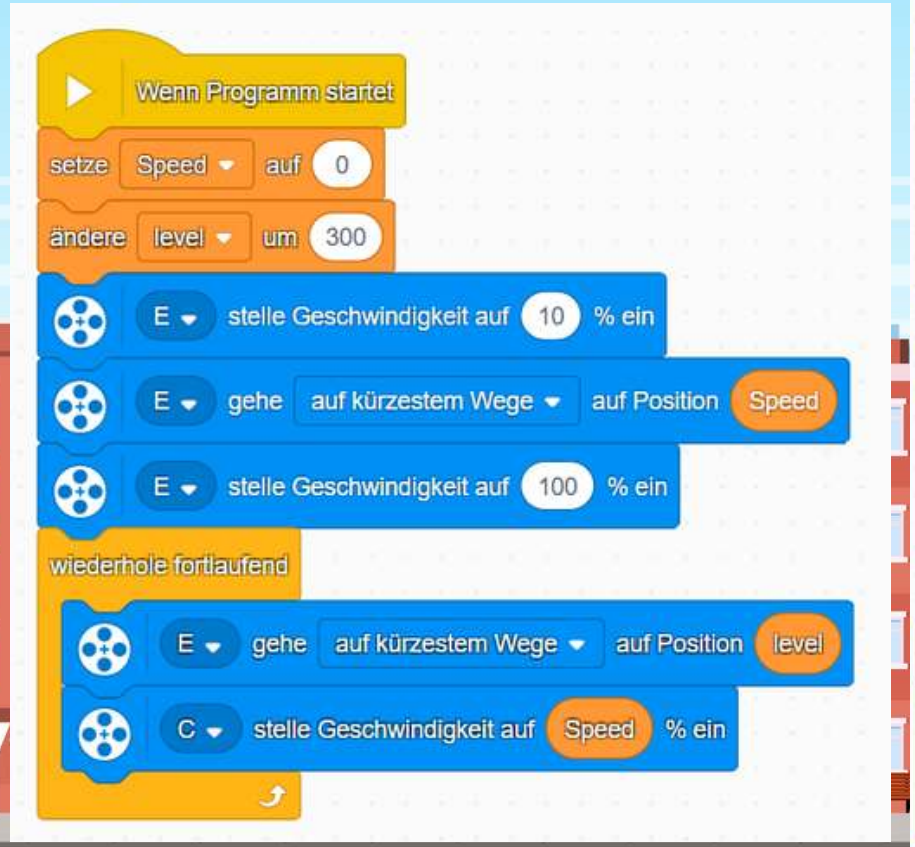

Steuere die Geschwindigkeit deines Karussells

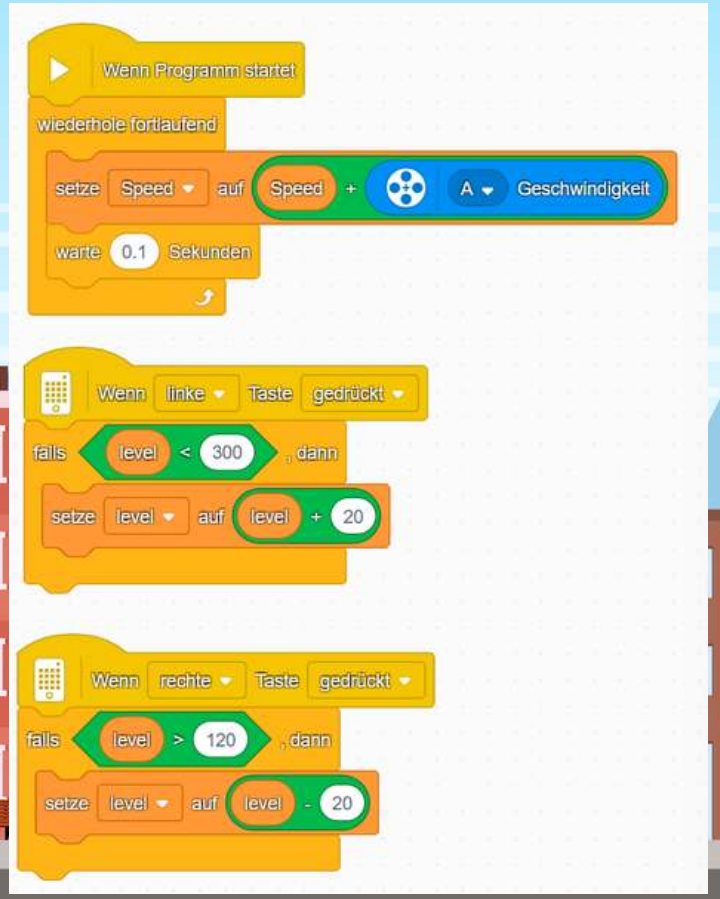

- **Das Ziel: Verwende** den Griff an Motor A, um die Geschwindigkeit deines Karussells (Motor C) dynamisch anzupassen.
- **Ausgangszustand:** Im folgenden Code setzen wir die Geschwindigkeit auf 0, sodass das Karussell zu Beginn stillsteht.
- **Die Aktion:** Drehe den Griff an Motor A. Diese Eingabe wird auf die Geschwindigkeitseinstellung von Motor C übertragen und erweckt dein Karussell zum Leben!

TASK 4

Um die Fahrt noch spannender zu machen, kannst du in diesem Programm den Neigungswinkel des Karussells einstellen. Übernimm die Steuerung mit deinem Mausrad:

- Links klicken: Verringere den Neigungswinkel.
- Rechts klicken: Erhöhe den Neigungswinkel.
- Hinweis: Achte darauf, die maximale Neigung nicht zu überschreiten!
-

TASK 5

Not-Aus

Als echter Karussellbetreiber musst du einen Not-Aus für dein Karussell programmieren. Dieser Code sorgt genau dafür – er stellt sicher, dass das Karussell bei Bedarf sofort sicher zum Stillstand kommt.
