CITY BUILDERS

Racing car

This is an "Open Project."
Your mission is to build a basic car chassis and personalize its design, but you can only use two motors
Tape out a custom race track on the floor.
Using the provided base code, you must modify it to navigate your car from start to finish in the shortest time possible.

TASK 1

Gestalte dein Auto ganz nach deinem Geschmack!

Denk daran: Du darfst nur zwei Motoren verwenden. Sei kreativ und lass dein Fahrzeug wie einen echten Rennwagen aussehen.

ATTENTION

BEFORE STARTING

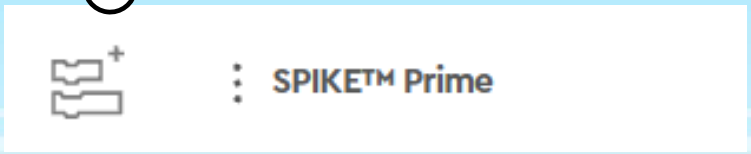

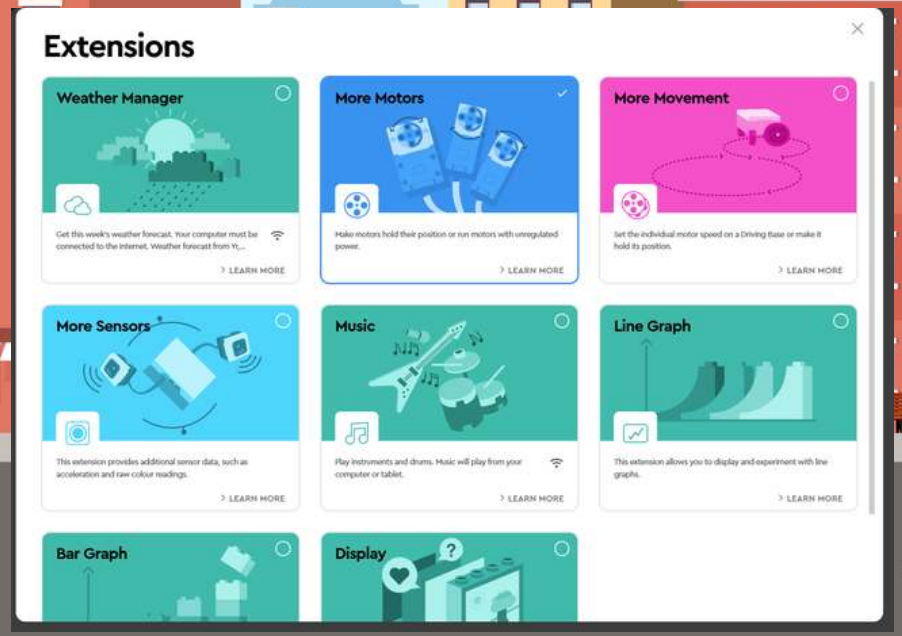

Um die Nullposition einzustellen, richte den Punkt auf dem Rotor auf den Kreis am Motorgehäuse aus.

To set the zero position, line up the dot on the rotor with the circle on the motor frame.

IMPORTANT

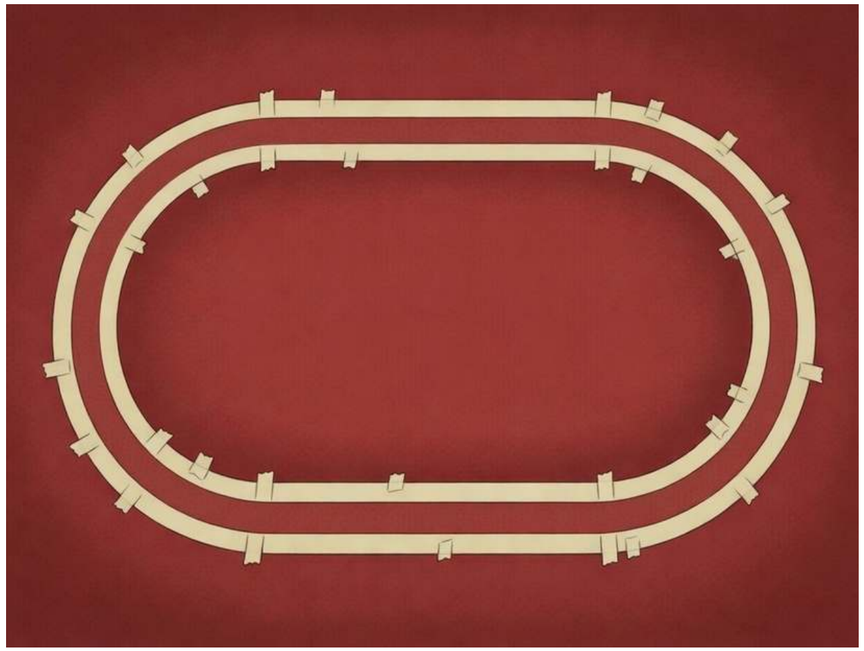

Wenn du den in dieser Anleitung verwendeten Block nicht finden kannst, klicke auf das Symbol in der unteren linken Ecke (siehe Abbildung links). Daraufhin öffnet sich ein Fenster, in dem du die für dieses Projekt benötigten Erweiterungsblöcke finden und hinzufügen kannst.

If you cannot find the specific block used in these instructions, click the icon in the bottom-left corner (shown in the figure on the left). This will open a window where you can find and add the extension blocks needed for this project.

RENNSTRECKE

Entwirf deine Rennstrecke.
Zeichne den Umriss der Strecke mit Klebeband auf den Boden. Die Strecke muss entweder oval oder rechteckig sein.

Racing car

CODE-BEISPIEL

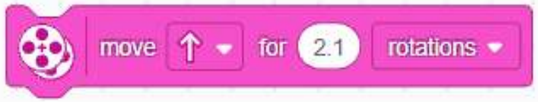

Die Werte für Drehungen und Dauer (Sekunden) müssen an deine jeweilige Strecke angepasst werden.

Profi-Tipp: Erstelle deinen Code Schritt für Schritt!

Definiere deine Variablen: Beginne mit den ersten beiden Blöcken.

Meistere die Gerade: Sorge zuerst dafür, dass das Auto korrekt vorwärts fährt.

Programmiere die Kurve: Passe deine Drehung an, um eine saubere Kurve zu fahren.

Beende die Runde: Wiederhole diese Schritte für alle vier Seiten der Strecke
