CITY BUILDERS

Self-Parking Car

Level: Easy

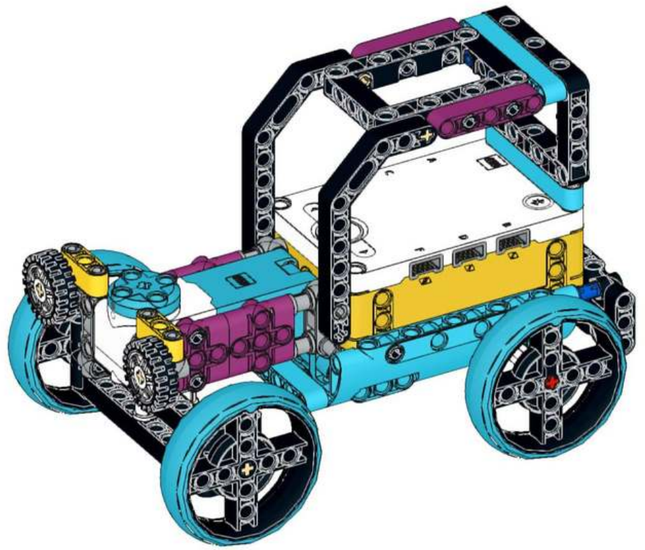

* The model is based on the original idea of Anton's Mindstorms Hot Rod

Setup

ATTENTION

BEFORE STARTING

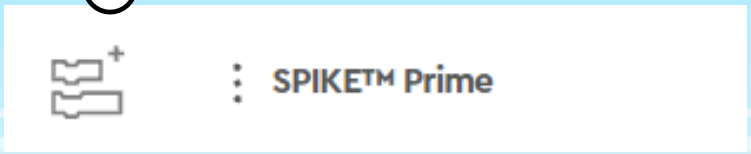

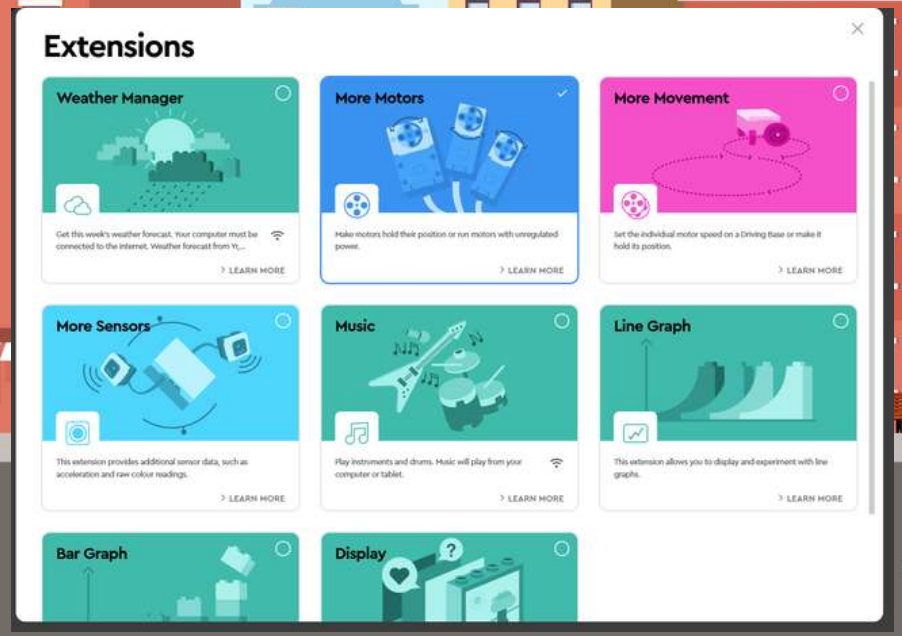

Um die Nullposition einzustellen, richte den Punkt auf dem Rotor auf den Kreis am Motorgehäuse aus.

To set the zero position, line up the dot on the rotor with the circle on the motor frame.

IMPORTANT

Wenn du den in dieser Anleitung verwendeten Block nicht finden kannst, klicke auf das Symbol in der unteren linken Ecke (siehe Abbildung links). Daraufhin öffnet sich ein Fenster, in dem du die für dieses Projekt benötigten Erweiterungsblöcke finden und hinzufügen kannst.

If you cannot find the specific block used in these instructions, click the icon in the bottom-left corner (shown in the figure on the left). This will open a window where you can find and add the extension blocks needed for this project.

TASK 1

Wenn Programm startet
E stelle Geschwindigkeit auf 30 % ein
E gehe auf kürzestem Wege auf Position 0
F lasse 2.8 Umdrehungen laufen
E lasse 20 Umdrehungen laufen
F lasse 460 Umdrehungen laufen
E gehe auf kürzestem Wege auf Position 0
E lasse 20 Umdrehungen laufen
F lasse 340 Umdrehungen laufen
E gehe auf kürzestem Wege auf Position 0
E lasse 20 Umdrehungen laufen
F lasse 110 Umdrehungen laufen
E gehe auf kürzestem Wege auf Position 0

TASK 1

when program starts
E set speed to 30 %
E go shortest path to position 0
F run for 2.8 rotations
E run for 20 degrees
F run for 460 degrees
E go shortest path to position 0
E run for 20 degrees
F run for 340 degrees
E go shortest path to position 0
E run for 20 degrees
F run for 110 degrees
E go shortest path to position 0
