Flappy Bird on Micro:bit! 🎮
Guide your LED through the gaps in the pipes falling from the top. Press Button A to move left and Button B to move right. Quickly find the open space in each falling row and stay clear of the pipes to keep playing. Touch an active LED and it's Game Over! How high can you score? 🏆

1

First, let's define the two pins, A and B, as our controllers (left and right) and then let's define the position from which Bird will start the game

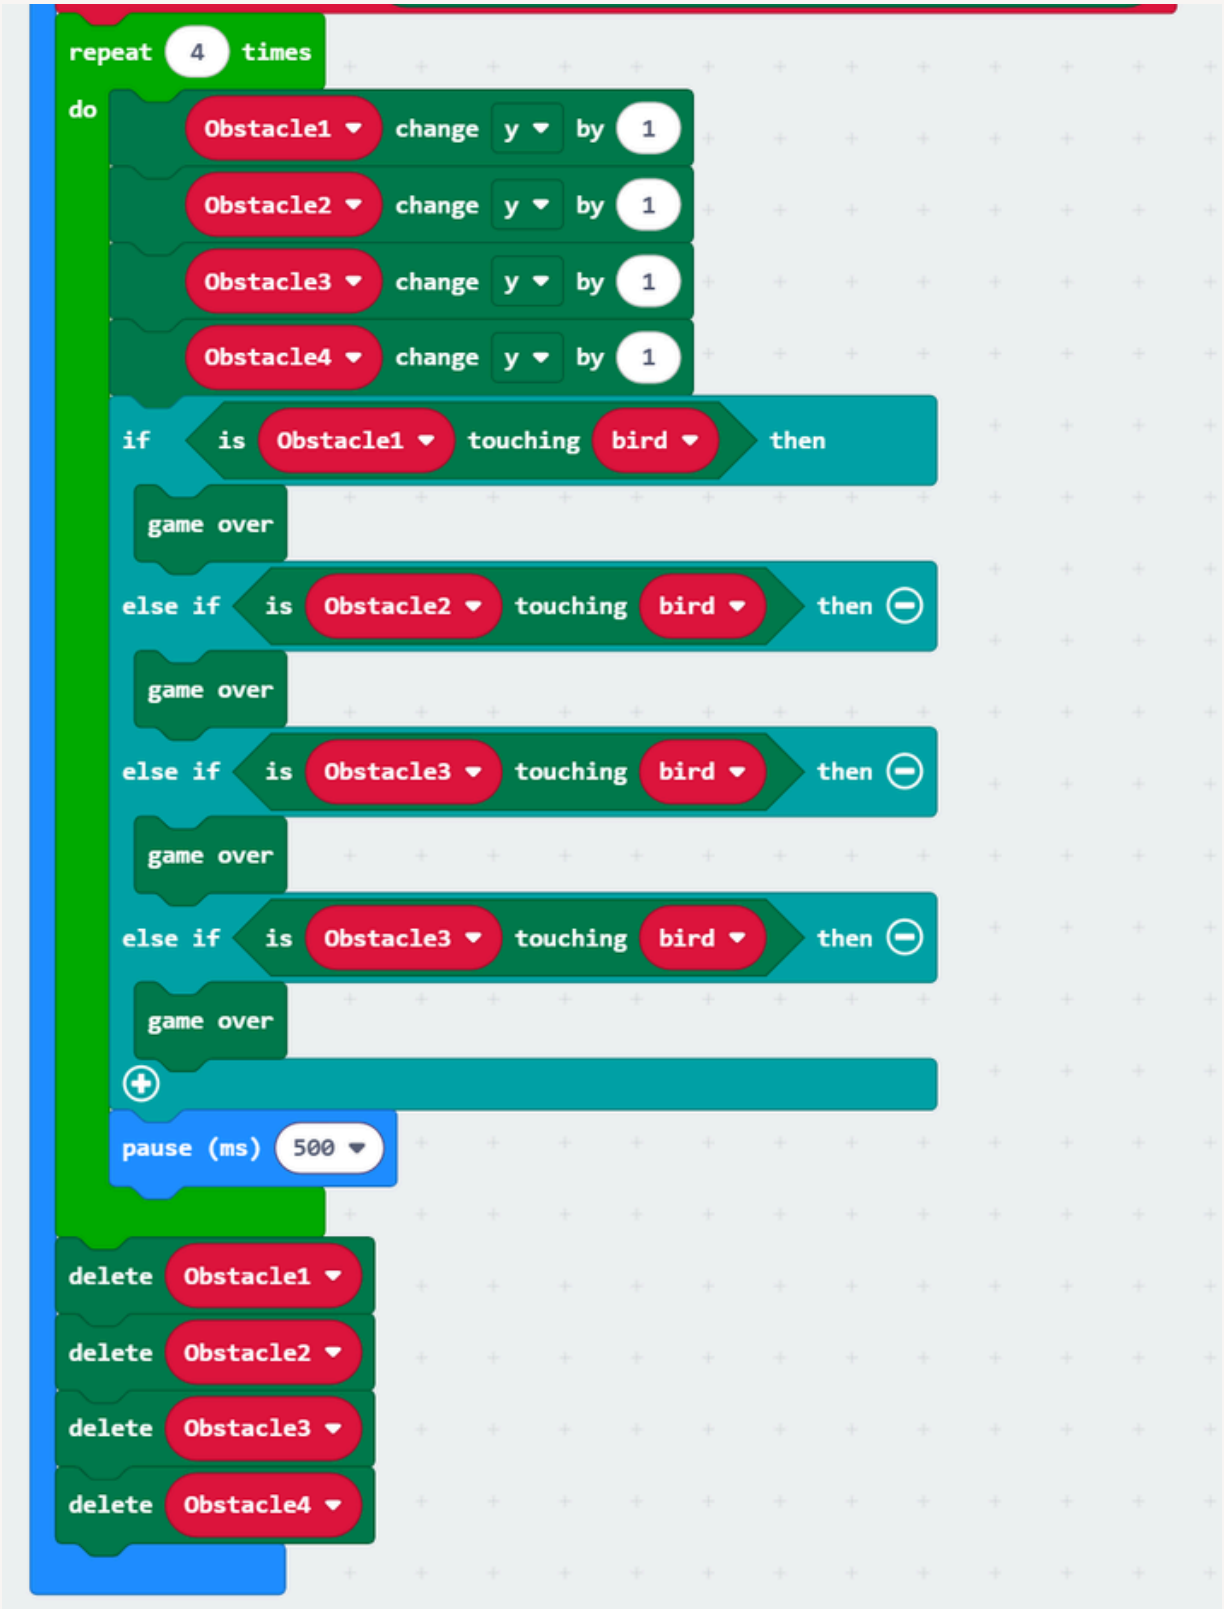

2

In the second step, we create the 4 obstacles (in "variable") and define their positions: y is fixed, x is random:

Within a repeat room (repeat 4, as the matrix is 5x5), the obstacles will begin to descend from their positions one step at a time
If I hit the bird, the game is over
If I hit the edge, they are destroyed and start again

3

4

- **Track the Score! Build a system that awards points every time the bird successfully passes through a pipe.**
- **Bring it to Life with Sound! Add fun sound effects for jumping, scoring, and crashing.**
- **Create an Intro Screen! Design a cool Flappy Bird title graphic or character sprite to welcome players before the game starts.**
